**DIRECTIONS OF THE DIGLOSSIA IN A MIXED REGION  
IN THE SOUTH EAST OF BULGARIA**

In Mineralni Bani municipality in the region of Haskovo, an anonymous sociolinguistic survey was carried out in relation with the contemporary Bulgarian rural language situation. The aim of this survey was to study the public opinion as a factor in the language processes development in the area. The research found out certain changes in the directions of the diglossia, increase in their number as well as some orientation of one of them towards the official state literary standard of the Republic of Turkey. This phenomenon is a problem for both Bulgarian politics and Bulgarian ethnopsychology.
